Features

Self Diagnosis

The microprocessor provides the possibility to detect and diagnose any fault or malfunction that occurs in the system. The error will be reflected by the blinking of the LED lights.

Advance Technology

Incorporating fuzzy logic control enables greater flexibility in system control handling to achieve

- Powerful, efficient and economical operation.
- Even room temperature control.
- Constant and quiet compressor operation.
- Enhanced system reliability and reduced maintenance costs.

On / Off Button on Indoor Unit

On/Off button is provided on the front panel of the unit. It can be used when the remote controller is missing or if its battery has run out. (Note: This button can also be used for forced operation mode)

Wireless Remote Controller

- The compact LCD transmitter is able to operate the air conditioner unit within the distance of 8 meters.
- Fan speed can be set at high / medium / low / super low or automatic.
- Sleep mode auto control will gradually increase or decrease the setting temperature to provide a comfortable surrounding for sleeping.
- Air flow direction can be controlled automatically.
- Room temperature is controlled by electronic thermostat.
- The real time timer allows the air conditioner to be switched On and Off automatically based on user settings.
- Turbo mode function is available to enables the required set temperature to be achieved in a short time.
- Personalized Setting allows user to preset and store 2 groups of personal settings (including timer setting) in the handset.

Higher Energy Savings

The inverter compressor is programmed to run at the optimum speed. This is controlled by input frequency that varies according to the indoor load requirements.

Once the indoor set temperature is achieved, the input frequency supply to the compressor will be reduced. Hence, less power is required to maintain the unit operation and this will consume less energy.

Improved Compressor Life Span

For this multi-split inverter system, once the unit is started, the compressor rotation speed is steadily ramp up or down based on load requirement throughout the operation. This control method gives the compressor motor a smooth operation. It helps to reduce the wear and tear of the compressor motor. In the long run, the life span of compressor is increased.

Overheating Protection (for heat pump unit only)

In case the internal and/or the external temperature are too high, or the filter is dirty and clogged up, the refrigerant may be overheated. The compressor will reduce its running speed in order to lower the temperature of heat exchanger. If the temperature is still very high, the compressor will stop.

Application Information

Operating Range

Ensure the operating temperature is in allowable range.

Cooling Only

Caution :

The use of your air conditioner outside the range of working temperature and humidity can result in serious failure.

Operation Guide

1	Transmission Source The source where the signal will be transmitted.	8	Operating Mode - Press the MODE button to select the type of operating mode. - For cooling only unit, the available modes are: COOL (❄️), DRY (💧) and FAN (🌀).
2	Signal Transmission Indication Blink to confirm that the last setting has been transmitted to the unit.	9	Fan Speed Selection - Press the 🌀 button continuously will toggle the fan speed in the following order: Low → Med → High → Auto - Stop pressing when the desired fan speed appears on the display screen.
3	Temperature Setting - To set the desired room temperature, press the ▲ or ▼ button to increase or decrease the set temperature. - The temperature setting range is from 16°C to 30°C (optional setting 20°C to 30°C).	10	"ON/OFF" Button - Press one to start the air conditioner unit. - Press again to stop the unit.
4	Personalize Setting - Press 🧑 and hold for 3s, then 🧑 will blink. Press again to cycle between 🧑 and 🧑. - Set the desired setting, then leave the hand set for 4s without pressing any key and it will save the setting into the programme. - Press 🧑 once to activate the P1 setting, press again to cycle between P1 and P2. - Press any key to deactivate the personalize setting.	11	Timer Cancel Press the TIMER CANCEL button to cancel the on timer setting.
5	Automatic Air Swing (optional) - Press the SWING 🌀 button to activate the automatic air swing function. - To distribute the air to a specific direction, press the SWING 🌀 button and wait until the louver move to the desired direction and press the button once again.	12	OFF Timer Setting - Press the OFF TIMER button will activate the off timer function. - Set the desired off time by pressing the OFF TIMER button continuously.
6	Silent Function - Press 🧑 for quiet operation. - Fan speed turn to minimum speed. - Press again to deactivate the function.	13	ON Timer Setting - Press the ON TIMER button will activate the on timer function. - Set the desired on time by pressing the ON TIMER button continuously. If the timer is set to 7.30am, the air conditioner will turn on at 7.30am sharp.
7	Sleep Mode Setting - Press the SLEEP button will activate the sleep mode function. This function is available under COOL, HEAT and AUTO mode. - When the unit is operating under cooling mode, the set temperature is increased by 0.5°C after 30 minutes, 1°C after an hour, and 2°C after 2 hours. - When the unit is operating under heating mode, the set temperature is decreased by 1°C after 30 minutes, 2°C after an hour, and 3°C after 2 hours.	14	Turbo Function - Press 🌀 for fast cooling. - Fan speed turn to maximum speed. - Press again to deactivate the function.
		15	Clock Time Setting Press 🕒 and hold to set the clock time.

Installation Guideline

Safety Precautions

WARNING

- Installation and maintenance should be performed by qualified persons who are familiar with local code and regulation, and experienced with this type of appliance.
- All field wiring must be installed in accordance with the national wiring regulation.
- Ensure that the rated voltage of the unit corresponds to that of the name plate before commencing wiring work according to the wiring diagram.
- The unit must be GROUNDED to prevent possible hazard due to insulation failure.
- All electrical wiring must not touch the refrigerant piping or any moving parts of the fan motors.
- Confirm that the unit has been switched OFF before installing or servicing the unit.
- Disconnect from the main power supply before servicing the air conditioner unit.
- DO NOT pull out the power cord when the power is ON. This may cause serious electrical shocks which may result in fire hazards.
- Keep the indoor and outdoor units, power cable and transmission wiring, at least 1m from TVs and radios, to prevent distorted pictures and static. {Depending on the type and source of the electrical waves, static may be heard even when more than 1m away}.

CAUTION

Please take note of the following important points when installing.

- **Do not install the unit where leakage of flammable gas may occur.**
 If gas leaks and accumulates around the unit, it may cause fire ignition.
- **Ensure that drainage piping is connected properly.**
 If the drainage piping is not connected properly, it may cause water leakage which will dampen the furniture.
- **Do not overcharge the unit.**
 This unit is factory pre-charged. Overcharge will cause over-current or damage to the compressor.
- **Ensure that the unit's panel is closed after service or installation.**
 Unsecured panels will cause the unit to operate noisily.
- **Sharp edges and coil surfaces are potential locations which may cause injury hazards. Avoid from being in contact with these places.**
- **Before turning off the power supply, set the remote controller's ON/OFF switch to the "OFF" position to prevent the nuisance tripping of the unit.** If this is not done, the unit's fans will start turning automatically when power resumes, posing a hazard to service personnel or the user.
- **Do not operate any heating apparatus too close to the air conditioner unit.** This may cause the plastic panel to melt or deform as a result of the excessive heat.
- **Ensure the color of wires of the outdoor unit and the terminal markings are same to the indoors respectively.**
- **IMPORTANT : DO NOT INSTALL OR USE THE AIR CONDITIONER UNIT IN A LAUNDRY ROOM.**
- **Do not use joined and twisted wires for incoming power supply.**

NOTICE

Disposal requirements

Your air conditioning product is marked with this symbol. This means that electrical and electronic products shall not be mixed with unsorted household waste.

Do not try to dismantle the system yourself: the dismantling of the air conditioning system, treatment of the refrigerant, of oil and of other parts must be done by a qualified installer in accordance with relevant local and national legislation. Air conditioners must be treated at a specialized treatment facility for re-use, recycling and recovery. By ensuring this product is disposed of correctly, you will help to prevent potential negative consequences for the environment and human health. Please contact the installer or local authority for more information.

Batteries must be removed from the remote controller and disposed of separately in accordance with relevant local and national legislation.

Installation of Indoor Unit

The indoor unit must be installed in such a way so as to prevent short circuit of the cool discharged air with the hot return air. Please follow the installation clearance shown in the figure. Do not place the indoor unit where there could be direct sunlight shining on it. Also, this location must be suitable for piping drainage and be away from doors or windows.

Routing of Piping

Remove the screw holding the front panel.

The refrigerant piping can be routed to the unit in a number of ways (left or right from the back of the unit) by using the cut-out holes on the casing of the unit (see figure). Bend the pipes carefully to the required position in order to align it with the holes. For the right hand and rear side out, hold the bottom of the piping and then position it to the required direction (see figure). The condensation drain hose can be taped to the pipes.

Right & Rear Side Routing

Mounting Installation Plate

Ensure that the wall is strong enough to withstand the weight of the unit. Otherwise, it is necessary to reinforce the wall with plates, beams or pillars.

Use the level gauge for horizontal mounting, and fix it with 4 suitable screws.

In case the rear piping draws out, drill a hole 65mm in diameter with a cone drill, slightly lower on the outside wall (see figure)

Hole With Cone Drill

Mount The Unit Onto The Installation Plate

Hook the indoor onto the upper portion of the installation plate (Engage the two hooks at the rear top of the indoor unit with the upper edge of the installation plate). Ensure that the hook are properly seated on the installation plate by moving it to the left and right.

Water Drainage Piping

The indoor pipe must be in a downward gradient for smooth drainage. Avoid situations that are likely to cause water leak.

Indoor unit combination for outdoor unit M5MSX020A/AR, M5MSX025A/AR and M5MSX030A/AR

Indoor units with model name M5WMX010G/GR, M5WMX015G/GR and M5WMX020G/GR could be coupled with this outdoor unit.

The following table shows the possible coupling combinations available.

No	Coupling Combinations (5WMX-G/GR)		
	M5MSX020A/AR	M5MSX025A/AR	M5MSX030A/AR
1	10+10	10+10+10	10+10+10+10
2	10+15	10+10+15	10+10+10+15
3	15+15	10+10+20	10+10+10+20
4		10+15+15	10+10+15+15
5		10+15+20	10+10+15+20
6		15+15+20	10+15+15+15
7			15+15+15+15

For further details on operation combinations, total capacity and other technical specifications, please refer to the technical manual.

Installation Of Outdoor Unit

The outdoor unit must be installed in such a way, so as to prevent short circuit of the hot discharged air or obstruction to the smooth air flow. Please follow the installation clearance shown in the figures below. Select the coolest possible place where intake air temperature is not greater than the outside air temperature (maximum 45°C/113°F).

Note: If there is any obstacle higher than 2m (6.56ft), or if there is any obstruction at the upper part of the unit, please allow more space than the figure indicated in the table shown below.

Installation Clearances

Dimensions	A	B	C	D
Minimum Distance(mm)	300	1000	300	500

Before installation the piping and connecting cord, please remove the access panel and plastic valve cover or service panel for easy access and safety. Refer to figures shown below.

Refrigerant Piping Work

Piping Length and Elevation

If the pipe is too long, both capacity and reliability of the unit will drop. As the number of bends increases, resistance to the flow of refrigerant system increases, thus lowering cooling capacity. As a result, the compressor may become defective. Always choose the shortest path and follow the recommendations as tabulated below.

Item	Model	Long Piping			O/D Precharged	Charge Amount for Additional Piping Length		
		M5WMX010 G/GR	M5WMX015 G/GR	M5WMX020 G/GR		20m	25m	30m
1	M5MSX020A/AR (1 TO 2)	20	20	20	1650g	0	+100g	+200g
		(Total length $L_1 + L_2 = 30m$)				40m	45m	50m
2	M5MSX025A/AR (1 TO 3)	20	20	20	2320g	0	+100g	+200g
		(Total length $L_1 + L_2 + L_3 = 50m$)				40m	50m	60m
3	M5MSX030A/AR (1 TO 4)	20	20	20		0	+200g	+400g
		(Total length $L_1 + L_2 + L_3 + L_4 = 60m$)						

Coupling Model	M5WMX010G/GR	M5WMX015G/GR	M5WMX020G/GR
Max. Elevation, H (m/ft)	5	5	5
Max. Number of Bends	10	10	10
Liquid Pipe Size	1/4"	1/4"	1/4"
Gas Pipe Size	3/8"	1/2"	1/2"

Individual indoor unit can have a maximum length of 20 m (65.6ft), maximum elevation of 5 m (32.8ft) and maximum number of bends of 10, however, the total pipe length must not exceed 30m (M5MSX020AR), 50m (M5MSX025AR) or 60m (M5MSX030AR) depending on the model of the outdoor unit.

Remark: The refrigerant pre-charged in the outdoor unit is for total piping length up to 20m for model M5MSX020A/AR and 40m for model M5MSX025A/AR and M5MSX030A/AR.

Piping Work

- Do not use contaminated or damaged copper tubing. Do not remove plastic, rubber plugs and brass nuts from the valves, fittings, tubings and coils until you are ready to connect suction or liquid line into valves or fittings.
- If any brazing work is required, ensure that the nitrogen gas passed through coil and joints while the brazing work is being done. This will eliminate soot formation on the inside walls of the copper tubings.
- Cut the connection pipe with a pipe cutter.
- Remove burrs from cut edges of the pipes with remover. Hold the end of the pipe downwards to prevent metal chips from entering the pipe.
- Insert the flare nuts, mounted on the connection parts of both the indoor unit and outdoor unit onto the copper pipes.
- Flare the pipe with extra length above the flaring tool as shown in the table below.
- The flare edge must be even and not cracked or scratched.

Ø TUBE, D			A(MM)
Inch	mm	Imperial	Rigid
1/4"	6.35	1.3	0.7
3/8"	9.52	1.6	1.0
1/2"	12.70	1.9	1.3
5/8"	15.88	2.2	1.7
3/4"	19.05	2.5	2.0

Pos.	M5MSX020 A/AR		M5MSX025 A/AR		M5MSX030 A/AR	
	Liquid	Gas	Liquid	Gas	Liquid	Gas
A	1/4"	3/8"	1/4"	3/8"	1/4"	3/8"
B	1/4"	3/8"	1/4"	3/8"	1/4"	3/8"
C			1/4"	3/8"	1/4"	3/8"
D					1/4"	3/8"

Piping Connection To The Units

- The outdoor unit is equipped with two to four sets of flare joints depending on O/D unit model. Refer to table below for flare joint size and location.
- In the case where gas pipe from the indoor unit does not match the outdoor flare joints, two different flare joint connectors are provided. The connector should be connected as shown in figure.

No	Flarte Joint Connector
1	3/7" to 1/2" Connector
2	1/2" to 3/8" Connector

- Align the center of the piping and tighten the flare nut sufficiently with fingers.
- Finally, tighten the flare nut with the torque wrench until the wrench clicks.

Pipe Size mm/(in)	Torque Nm/(ft - lb)
6.35 (1/4)	18 (13.3)
9.53 (3/8)	42 (31.0)
12.70 (1/2)	55 (40.6)

Electrical Wiring Connection

IMPORTANT : The figures shown in the table are for information purpose only. They should be checked and selected to comply with the local/national codes of regulations. This is also to the type of installation and conductors used.

- All wiring must be connected accordingly to the diagram above, with reference to the piping connection. Mismatch any wiring with different piping will cause severe damage to the system.
- All wires must be firmly connected.
- All wires must not touch the refrigerant piping, compressor or any moving parts of the fan motor.
- The connecting wires between the indoor unit and the outdoor unit must be clamped on the wire clamps and the cable tie (push releasable) at the indoor unit and outdoor unit respectively as shown in the figures.
- The power supply cord must be equivalent to H05RN-F (245IEC57) which is the minimum requirement.

Model	M5WMX010G/015G	M5WMX020G/GR
Voltage range	220V-240V / 1 Ph / 50Hz +	
Power supply cable size (mm ²)	3.0	
Number of wire	3	
Interconnection cable size (mm ²)	1.5	2.5
Number of wire	4	4
Recommended time delay fuse for O/D unit	25	

- The table above shows the electrical wire sizing for different connection cables. If the length of the cable is more than 2m, use cable with bigger size.
- The figures shown in the table are for information purpose only. They should be checked and selected to comply with the local/national codes of regulations. This is also to the type of installation and conductors used.

Special Precautions When Dealing With R410A Unit

R410A is a new HFC refrigerant which does not damage the ozone layer. The working pressure of this new refrigerant is 1.6 times higher than conventional refrigerant (R22), thus proper installation / servicing is essential.

- Never use refrigerant other than R410A in an air conditioner which designed to operate with R410A.
- POE oil is used as lubricant for R410A compressor, which is different from the mineral oil used for R22 compressor. During installation or servicing, extra precaution must be taken not to expose the R410A system too long to moist air. Residual POE oil in the piping and components can absorb moisture from the air.
- To prevent mischarging, the diameter of the service port on the flare valve is different from that of R22.
- Use tools and materials exclusively for refrigerant R410A. Tools exclusively for R410A are manifold valve, charging hose, pressure gauge, gas leak detector, flare tools, torque wrench, vacuum pump and refrigerant cylinder.
- As an R410A air conditioner incurs higher pressure than R22 units, it is essential to choose the copper pipes correctly. Never use copper pipes thinner than 0.8mm even though they are available in the market.
- If the refrigerant gas leakage occurs during installation / servicing, be sure to ventilate fully. If the refrigerant gas comes into contact with fire, a poisonous gas may occur.
- When installing or removing an air conditioner, do not allow air or moisture to remain in the refrigerant cycle.

Vacuumping And Charging

Purging The Piping And Indoor Unit

Except for the outdoor unit which is pre-charged with refrigerant R22, the indoor unit and the refrigerant connection pipes must be air-purged because the air containing moisture that remains in the refrigerant cycle may cause malfunction of the compressor.

- Make sure all pipes are connected securely to the outdoor and indoor valves.
- Remove the caps from the flare valve and the service. Take note that there are a total of two service ports for M5MSX020A/AR, three service ports for M5MSX025A/AR and four service ports for M5MSX030A/AR.
- Connect the center of the charging gauge to the vacuum pump.
- Starting from the bottom 3-way valve (labeled A), connect the charging gauge to the 3-way valve's service port. (The numbers of service ports depend on the O/D unit model).
- Start the vacuum pump. Evacuate for approximately 30 minutes. The evacuation time varies with different vacuum pump capacity. Confirm that the charging gauge needle has moved towards -760mmHg.
- Proceed to the next 3-way valve and repeat the steps above.

Caution

- If the gauge needle does not move to -760mmHg, be ure to check for gas leaks (using the refrigerant detector) at flare type connection of the indoor and outdoor unit and repair the leak before proceeding to the next step.
- Close the valve of the charging gauge and stop the vacuum pump.
- On the outdoor unit, open the suction valve (3 way) and liquid valve (2 way) (in anti-clockwise direction) with 4mm key for hexagon sacked screw.

Additional Charge

The refrigerant is pre-charged in the outdoor unit for specific piping length. Please refer to page 1-5 for further detail on additional charge.

Charge operation

This operation must be done by using a gas cylinder and a precise weighing machine. The additional charge is topped up into the outdoor unit using the suction valve via the service port.

- Remove the service port cap.
- Connect the low pressure side of the charging gauge to the suction service port center of the cylinder tank and close the high pressure side of the gauge. Purge the air from the service hose.
- Start the air conditioner unit.
- Open the gas cylinder and low pressure charging valve.
- When the required refrigerant quantity is pumped into the unit, close the low pressure side and the gas cylinder valve.
- Disconnect the service hose from service port. Put back the service port cap.

Caution

- R410A must be charged as liquid. Usually R410A cylinder is equipped with a dip-pipe for liquid withdrawal. If there is no dip-pipe, the cylinder should be inverted so as to withdraw liquid R410A from the valve.
- Do not top-up when servicing leak, as this will reduce the unit performance. Vacuum the unit thoroughly and then charge the unit with fresh R410A according to the amount recommended in the specification.

Indicator Lights

IR Signal Receiver

When an infrared remote control operating signal has been transmitted, the signal receiver on indoor unit will make a (beep) sound to confirm acceptance of the signal transmission. The table shows the LED indicator lights for the indoor air conditioner unit under normal operation and fault conditions. The LED indicator lights are located at the middle of the air conditioner unit for 5WMX-G/GR series.

1) ALL SPECIFICATIONS ARE SUBJECTED TO CHANGE BY THE MANUFACTURER WITHOUT PRIOR NOTICE.

2) ALL UNITS ARE BEING TESTED AND COMPLY TO ISO 5151.

3) NOMINAL COOLING AND HEATING CAPACITY ARE BASED ON THE CONDITIONS BELOW :

COOLING - 27°C DB / 19°C WB INDOOR AND 35°C DB / 24°C WB OUTDOOR

4) SOUND PRESSURE LEVEL ARE ACCORDING TO JIS B 8615 STANDARD. POSITION OF THE MEASUREMENT POINT IS 1m IN FRONT AND 1m BELOW THE UNIT.

Service and Maintenance

Service Parts	Maintenance Procedures	Period
Indoor air filter	1. Remove any dust adhering to the filter by using a vacuum cleaner or wash in lukewarm water (below 40°C) with a neutral cleaning detergent. 2. Rinse the filter well and dry before placing it back onto the unit. 3. Do not use gasoline, volatile substances or chemicals to clean the filter.	At least once every 2 weeks. More frequently if necessary.
Indoor unit	1. Clean any dirt or dust on the grille or panel by wiping it off with a soft cloth soaked in lukewarm water (below 40°C) and a neutral detergent solution. 2. Do not use gasoline, volatile substances or chemicals to clean the indoor unit	At least once every 2 weeks. More frequently if necessary.

Caution

Do not operate any heating apparatus too close to the air conditioner unit. This may cause the plastic panel to melt or deform as a result of the excessive heat.

When The Unit Is Not Used For An Extended Period Of Time

Operate the unit for 2 hours with the following setting.

Operating mode : cool
Temperature : 30°C

Remove the power plug.
If you are using an independent electric circuit for your unit, cut off the circuit.
Remove the batteries in the remote control.

Electrostatic Filter

Dual Action Electrostatic Air Purifying and Deodorizing Filter Media and Filter Frame

Action 1-

Electrostatic air purifying filter

Removes microscopic dust, smoke and small invisible particules to keep the room air clean with pre-charged electrostatic polypropylene filter.

Action 2-

Deodorizing filter

Remove unwanted smells and odors in the air and keep the room air fresh with activated carbon filter.

Caution

1. The electrostatic air purifying and deodorizing filter should be replaced once every 6 months or when the filter changes color to brownish, whichever is sooner.
2. Used dusty filters should be disposed and shouldn't be reused, even if it has been cleaned and washed.
3. The filter is a consumable part which you can purchase from your air conditioner dealer.
4. Use the new filter immediately once it has been taken out from its sealed packing. Do not unpack the new filter too early before it is actually used as this may decrease its deodorizing effect.

Troubleshooting

If there is any malfunction of the air conditioner unit detected, please switch off the main power supply immediately before proceeding with the following troubleshooting procedures as safety precautions. The following are some common fault conditions and simple troubleshooting tips. If encounter any faulty conditions which are not listed, please contact nearest dealer or service maintenance. DO NOT attempt to troubleshoot the unit by yourself.

No	Fault Conditions	Possible causes / corrective actions
1	The air conditioner unit will not start straight away after a power failure or restart unit.	The air conditioner unit has a 3 minutes restart protection. Please wait for the unit to restart by leaving the main power on.
2	The compressor does not operate 3 minutes after the air conditioner unit is started.	- Protection against frequent starting. - Wait for 3 or 4 minutes for the compressor to start operating by it self.
3	The airflow is too slow or room cannot be cooled sufficiently.	- The air filter is dirty. - The doors and windows are opened. - The air suction and discharge of both indoor and outdoor units are clogged or blocked. - The regulated temperature or temperature setting is not low enough.
4	Discharge airflow has bad odor.	- Odour may be cause by cigarettes, smoke particles, perfume and others, which might have adhered onto the coil. - Contact your nearest dealer.
5	Condensation on the front air grille of the indoor unit.	- This is caused by air humidity after an extended period of operation. - The set temperature is too low. Increase the temperature setting and operate the unit at high fan speed.
6	Water flowing out from the air conditioner.	
7	Hissing airflow sound from the air conditioner unit during operation.	Liquid refrigerant flowing into the evaporator coil.
8	The indoor unit's LED indication keeps blinking.	- Check the fault indication listed under section INDICATOR LIGHTS. - If LED display indicates defrost operation, ignore it. This shows that the outdoor unit is defrosting the ice at the outdoor unit. - For other LED display, follow the COMPRESSOR STOPPED TROUBLESHOOTING INSTRUCTIONS at next section.
9	The outdoor unit will not operate and the indoor unit's LED indication does not blink.	- Power failure or fuse needs to be replaced. Check power supply. - The main power plug is disconnected or the circuit breaking is turned off. - It is possible that the delay timer has been set incorrectly. - If the problem persists after all these verifications, follow the COMPRESSOR STOPPED TROUBLESHOOTING INSTRUCTIONS at next section.

Normal Running Mode Condition

If the air conditioner unit has no faulty indications and the compressor is running at normal mode, the outdoor P.C. Board's LED indication will blink at a slower pace. The table below shows the significant meaning of different running mode and limitation for this air conditioner unit. One must not attempt to see the LED indication blinking unless instructed to do so.

Blinks Blinking	Indication
1	Normal running, with no limitation
2	Voltage limit
3	Cooling unit : Outdoor coil temperature limit Heating unit : Indoor coil temperature limit
4	Total current limit
5	Discharge temperature unit
6	Cooling unit : Indoor coil temperature limit
7	Indoor fan control
8	Outdoor frequency adjustment

Compressor Stopped Error Indication And Troubleshooting Guide

If the compressor stop unexpectedly, the outdoor P.C.Board's LED indication will blink accordingly to the error it detects. The table below shows the meaning according to the number of LED blinking and the corrective action that one should take.

Blink		Fault Indication	Corrective Action
RED	YELLOW		
LED	LED		
0	1	Outdoor ambient sensor error	Check outdoor ambient sensor wire and connection
0	2	Outdoor coil sensor error	Check outdoor coil sensor wire and connection
0	3	Outdoor discharge sensor error/ Compressor overheat indication	Check outdoor discharge sensor wire and connection/ Check pressure and compressor/Not enough refrigerant/ indoor overload
0	4	DC compressor feedback error	Check compressor wire and feedback wire
0	5	Communication error	Check communication wire and connection for both indoor and outdoor
0	6	Over current error	Check total current:check pressure and compressor
0	7	No load	Ignore
0	8	Over/ under voltage	Check power supply
0	9	DC compressor start failure	Check compressor wire and feedback wire;check compressor
1	0	Cooling overload	Check whether outdoor unit is blocked or not;check pressure
1	1	Defrost	Ignore
1	2	IPM Protection	Check power supply; check main board/filter board; check bridge diode; check IPM board; check compressor
1	3	EEPROM	Check EEPROM chip connection
1	4	EEPROM write error	Check EEPROM chip connection
1	5	DC fan motor no feed back	Check fan motor wire connection
1	6	AC peak current error	
1	7	Outdoor suction sensor error	Check outdoor suction sensor wire and connection
1	9	DC compressor speed control error	Check IPM board; check compressor
2	1	Outdoor suction A sensor error	Check suction sensor wire pipe A and connection
2	2	Outdoor suction B sensor error	Check suction sensor wire pipe B and connection
2	3	Outdoor suction C sensor error	Check suction sensor wire pipe C and connection
2	4	Outdoor suction D sensor error	Check suction sensor wire pipe D and connection
3	1	Indoor A communication error	Check communication wire and connection with indoor A
3	2	Indoor B communication error	Check communication wire and connection with indoor B
3	3	Indoor C communication error	Check communication wire and connection with indoor C
3	4	Indoor D communication error	Check communication wire and connection with indoor D

Troubleshooting Progress

If the air conditioner is not operating normally, One should follow the troubleshooting steps as stated in the flow chart below

Check Point (1) – Power Supply

Step-by-step troubleshooting guide for power supply checking.

Check Point (2) – Bridge Diode

Step-by-step troubleshooting guide for identifying bridge diode error.

Check Point (3) – IPM Board

Step-by-step troubleshooting guide for identifying IPM Board error.

Check Point (4) – Compressor

Step-by-step troubleshooting guide for identifying compressor failure.
